The Benefits of Owning iL3K28-U0

Your mailbox may have had flooded with the information about our leading product- ViCAT. To refresh your mind, we'd like to give you hark back to our light source controller, ViLIGHT in this issue. ViLIGHT, ViE's smart network-based lighting control system that can be used in one or more computing devices, defines as the programmable sequential controller for manufacturers.

Our current and the only model- iL3K28-U0- came with a controller board that possesses 8 analog output channels to drive light sources (LEDs) for industrial machine vision applications. Users are able to control and drive the light source intensity to their desired level with triggering speed up to 1.5kHz. The LSC can also be configured via USB port to set its operating output current, channel grouping and other settings respectively by the user itself.

To sum it up, ViLIGHT serves to purvey the right amount of light based on the users' needs.

Your feedback is important to help us improving our service

Semicon Southeast Asia, Thanks for Dropping By!

In May 2019, you played an important role by showing your tremendous support to us through a grand tradeshow for the electronics industry in Southeast Asia. We co-joined ViTrox, our parent company to exhibit the latest vision solutions and IIoT solutions in Semicon SEA 2019 on 7th to 9th May 2019 at MITEC, Kuala Lumpur.

Apart from showcasing the advanced vision solutions and the Industry 4.0 smart solution, ViE was beyond thrilled to be given an opportunity to display a wide range and cutting-edge standalone IO solution, ViCAT to the attendees. Apart from demonstrating the integration between ViTrox's V-ONE and our ViCAT, we are personally intrigued that our interactions during the 3-day event were fruitful and productive. Not only that you are now aware of the smart solutions exist on the market, but we also further understand the expectations and pain points of customers simultaneously.

Once again, we sincerely appreciate your support and we hope to do it better next year.
