ViE Partners with KINGSTAR to Deliver Cutting-Edge EtherCAT Solutions to Southeast Asia

PENANG, MALAYSIA – August 2017 – [ViE Technologies](#), a 100% owned subsidiary of ViTrox Corporation Berhad, today announced that it will partner with [KINGSTAR](#) to provide the next generation of EtherCAT solutions for businesses in Southeast Asia.

ViE produces a variety of Electronics Communication Solutions (ECS) for machine automation, mainly used in data communication and motion control. ViE's new generation of EtherCAT solutions, built in collaboration with KINGSTAR, will meet Southeast Asia's growing market demand.

This unique partnership will include ViE's Data Acquisition Product (DAQ), which collects and monitors data to communicate more effectively between machine and industrial controllers, and the [KINGSTAR Soft Motion Platform](#). KINGSTAR is an open and standards-based, integrated platform that enables engineers to design, develop and integrate applications with either [KINGSTAR's Soft Motion library](#) and [software PLC](#) or third-party software.

Through KINGSTAR's collaboration with ViE, customers in Southeast Asia will benefit from a customizable and cost-effective EtherCAT solution that can replace some existing hardware. Because EtherCAT is customizable and easy to integrate, it can meet the requirements of local customers while solving business challenges both today and in the future.

ViE and KINGSTAR plan to promote EtherCAT to the Malaysia market, then expand to the Southeast Asia region. Through this partnership and the wider adoption of EtherCAT, Southeast Asian companies will take a dramatic step forward toward Industry 4.0.
